

Figure 1. Aerial view of the building complex.

### Figure 2. Groundwater monitoring network.

Figure 2 shows the location of the groundwater monitoring network around the building complex.

The groundwater monitoring network consists of several monitoring wells located around the building complex. The monitoring wells are used to monitor the groundwater quality and quantity. The monitoring wells are located at various depths and locations around the building complex. The monitoring wells are used to monitor the groundwater quality and quantity. The monitoring wells are located at various depths and locations around the building complex.

The monitoring wells are used to monitor the groundwater quality and quantity. The monitoring wells are located at various depths and locations around the building complex. The monitoring wells are used to monitor the groundwater quality and quantity. The monitoring wells are located at various depths and locations around the building complex.
